

Dear Clutter Hiring Manager,

My name is Alexander Rowland, and I am submitting my application for the Junior Software Engineer position at Clutter. I spoke recently with David Feinerman and let him know that I would be applying.

I am a Full Stack Software Engineer working primarily in the MERN Stack, and am excited to work with more languages and technologies as my career advances. Currently, I am co-teaching an immersive web development program at General Assembly, a program which I attended earlier this year. As a teacher, it is my job to explain a variety of programming topics such that both the strongest and weakest students in class can understand the material. I particularly enjoy watching my students tackle problems in their own unique ways with the tools we have learned.

I recently created a web application that checks current surfing conditions along the California coast. The application allows users to search for nearby spots based off any address within 30 miles of the coast, and to leave comments about each spot they visit.

Working at one of Los Angeles' fastest growing startups strikes me as an ideal opportunity to grow. I thrive in fast-paced results-oriented work environments, and enjoy being on a team with other hard workers who I can learn from. As a Junior Software Engineer at Clutter, I will bring a strong work ethic, a love for challenges, and an excitement to learn.

I look forward to hearing from you soon.

Best,

Alexander Rowland
